### **EMSystem Agrees to Purchase Electronic Patient Healthcare Business from Vital Data Technology**

***Solution acquisition provides first fully integrated, real-time  
emergency preparedness and communication solution for the industry***

**MILWAUKEE, WI and NEWPORT BEACH, CA: (December 13, 2007)** – EMSystem, LLC and Vital Data Technology, LLC announced today that EMSystem has agreed to acquire Vital Patient Care Record (Vital PCR) and related technologies from Vital Data Technology.

With this solution acquisition, the new EMSystem product suite provides the marketplace with the first fully-integrated and real-time emergency preparedness and communication solution to further improve regional patient care communications and information sharing. The new solution will include patient point-of-care emergency preparedness and data capture, patient tracking, hospital resource management, volunteer registry and data analytics, and a reporting solutions suite. EMSystem solutions are currently used by more than 1200 hospitals in 20 states, covering more than 35% of the U.S. population.

EMSystem plans to quickly integrate the Vital PCR patient care reporting solution into its existing resource management solution, EMResource™ and its patient tracking solution, EMTrack™.

“By offering real-time patient point-of-care data capture, and tracking, our customers can leverage this information to improve quality of care, particularly in an emergency response situation,” said Andy Nunemaker, CEO of EMSystem. “We will be in a position to provide our customers with support documentation and reporting of EMS runs for pre-hospital trauma, medical illness, and inter-facility transfers including runs in which no patient contact occurs.”

“Pre-hospital patient care reporting is a natural compliment to our existing business lines,” said Bob Hedgcock, CTO of EMSystem. “We were impressed with the Vital PCR product suite due to its strong analytical capabilities, ability to integrate data from multiple sources, and real-time information flow to capture and share patient data.”

EMSystem and Vital Data Technology will also collaborate on a joint product strategy together developing interoperable and real-time capabilities between their respective technologies.

“Our partnership with a market leader and innovator, such as EMSystem, represents a key step in the development of our combined vision of creating a fully interoperable solutions network providing value at each critical point in the continuum of emergency medical care,” said Matt D’Ambrosia, CEO of Vital Data Technology. “And with our divestment of the Vital PCR suite of solutions, Vital Data Technology will now be able to concentrate on developing and delivering MyVitalData, the first electronic personal health record tethered to emergency care. MyVitalData’s integration with the EMSystem product suite will provide 115,000,000 people with

the ability to share their medical information with emergency care providers and hospitals in a safe and secure manner. With EMSsystem, our combined technologies will mean better care for the communities we serve.”

Nunemaker added, “Our two companies have a shared vision of the future for emergency medical care and we are excited to work together to bring that vision to fruition for our customers and the marketplace”.

### **About EMSsystem**

EMSsystem, LLC is a leading provider of real-time emergency communications and resource management solutions that help state and regional organizations with emergency preparedness and medical response to mass casualty incidents, and public health occurrences. The company provides ASP-based ambulance diversion, patient tracking, mass casualty incident support, syndromic surveillance, hospital bed tracking, volunteer registry and public health alerting solutions. EMSsystem solutions are currently used by more than 1200 hospitals in 20 states, covering more than 35% of the U.S. population. The company, founded in 1998, is based in Milwaukee, Wisconsin. Additional information is available at [www.emssystem.com](http://www.emssystem.com).

**About Vital Data Technology** Vital Data Technology LLC, headquartered in Newport Beach, California, is an innovator of healthcare solutions that share accurate and timely patient data to the right emergency care personnel at the right time. MyVitalData is the first Emergency Care Gateway, an e-personal health record tethered to emergency care, that connects individuals with first responders and hospitals to share health information within a secure HIPAA environment in real-time. Vital Data Technology is Microsoft’s HealthVault partner for Emergency Medical Services solutions. The company’s integrated solutions enable patients to manage and take control of their medical information.
